

SPLIT SET MINING SYSTEMS
UNDERGROUND ROOF SUPPORT PRODUCTS

BARRACUDA-P

**FACING
OBSTACLES.
PROVIDING
SOLUTIONS.
CREATING CHANGE.**

INNOVATING SAFETY AND SPEED IN THE MINING INDUSTRY

“**THE BARRACUDA-P
WILL SPEED UP
DEVELOPMENT CYCLE
TIMES TO A RATE
THE INDUSTRY HAS
NEVER EXPERIENCED
BEFORE.**”

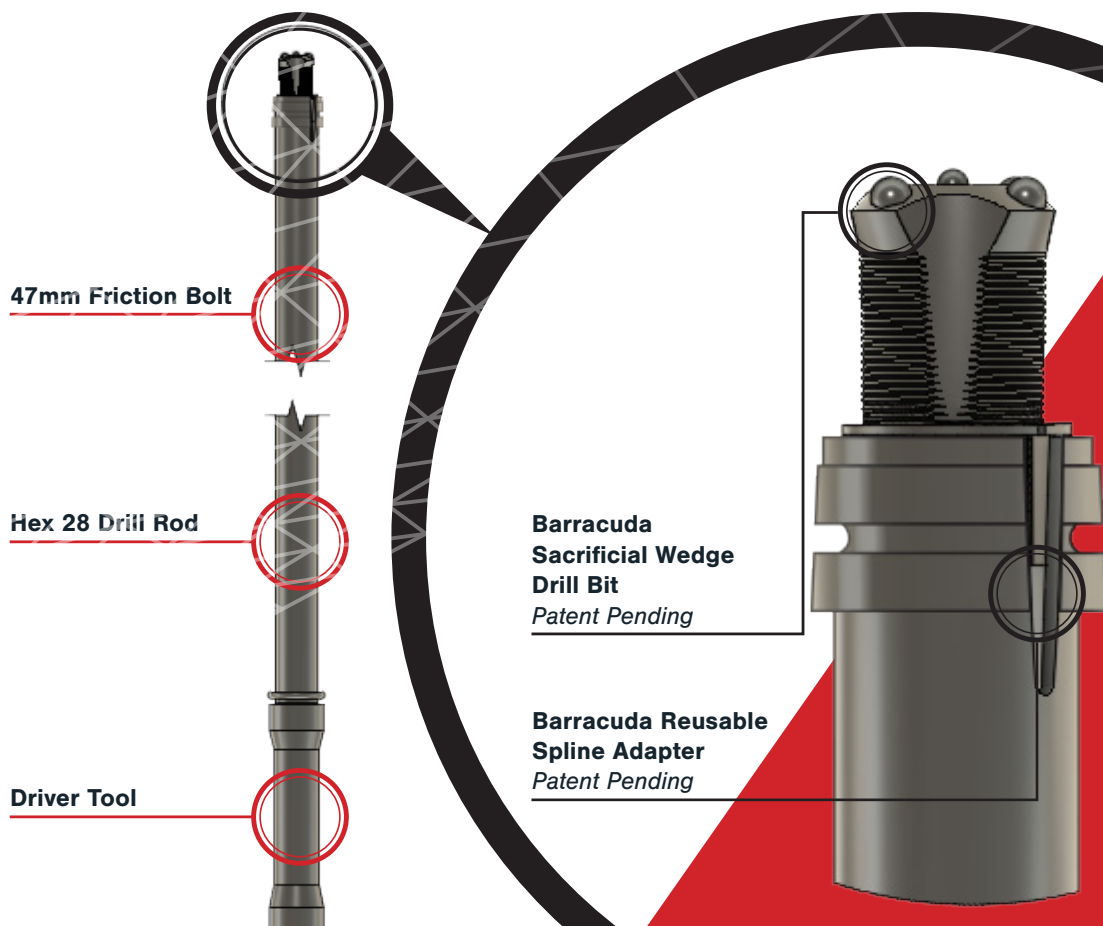

Finally, a TRUE single pass, high capacity rock bolt installation system.

The high capacity, point anchor rock bolt is fully installed simultaneously as the hole is drilled, creating a compelling, competitive advantage over any other ground support product on the market.

The unique patent pending design allows for the high load, point anchor rock bolt to be installed whilst drilling the hole. The anchor mechanism is engaged immediately thereafter in the same process.

This all happens in the time it takes to just drill the hole for a conventional 2 pass system, making the Barracuda-P the most efficient rock bolt system available in the world by a significant margin.

A MUCH STRONGER & FASTER OPTION COMPARED WITH CONVENTIONAL FRICTION BOLTS

DRIVING PROGRESS

Bolting time **decreased**
by **70%**

Hole diameter is **always**
guaranteed 100% accurate

Save 1 minute per
Bolt installation time
compared with any other
rock bolt system

Eliminates the need to spot
bolt holes, creating **safer**
work conditions as a result
of **less exposure**

Point anchor capable
of **14-15T load strength**

Lower unit cost than other
2 pass, point anchor bolt products
currently on the market

Two booms can be used
to drill/install simultaneously

Options to tailor for **super**
hard and abrasive ground

Reliable in both **weak and**
hard ground

Eliminates Boom idle time
throughout bolting cycle

Eliminates operator error
in installation quality
(bolt misalignment, bending,
hole size)

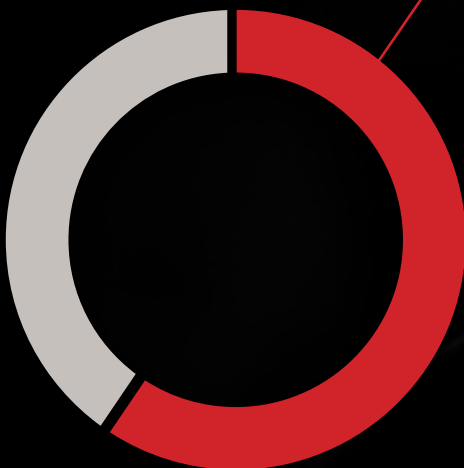

Options to make the Friction
Bolt component from
stronger material **to achieve**
higher ultimate strength

Barracuda-P's anchor point
is at the tip of the Friction
Bolt achieving a **full**
2.4 meters of support

BOLTING TIME SAVED

“

**THE BARRACUDA-P HAS
PROVEN TO INCREASE
THE LOAD BEARING
CAPACITY OF A STANDARD
FRICTION BOLT BY 65%,
WHILE SPEEDING BOLTING
TIMES UP BY 70%.**
